Demo Note for the A8582 Evaluation Board

$4.7V_{IN}$ – $40V_{IN}$, $3.3V_{OUT}$, 2.0A, 2MHz Asynchronous Buck Regulator

GENERAL SPECIFICATIONS

Specification	Min	Nom	Max	Units
Absolute Maximum Input Voltage	–0.3	–	40	Volts
Operating Input Voltage Range	4.7	12	36	Volts
V_{IN} **START** Threshold, V_{IN} rising	–	4.2	4.6	Volts
V_{IN} **STOP** Threshold, V_{IN} falling	–	3.8	4.2	Volts
Output Voltage (FB: 5.23K/16.5K, ±1%)	3.20	3.32	3.44	Volts
Steady-State Output Current ($12V_{IN}$)	–	2.0	2.5	A
Pulse-by-pulse Current Limit @ 30%	2.6	–	3.4	A
Enable/Synchronization Input	–0.3	–	5.5	Volts

OPERATING INSTRUCTIONS

Input Power Connection:

Connect a 12V power supply from Vin to GND that is capable of at least 2A. **Once operational, V_{IN} can fall as low as $3.8V_{TYP}$ ($4.2V_{MAX}$) before the A8582 is reset**.

Enable Input Connection:

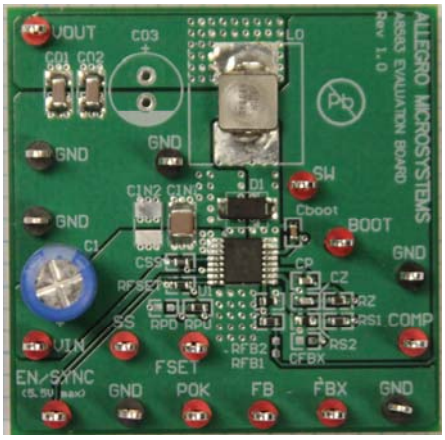
Connect an Enable signal from EN/SYNC to GND. If the EN/SYNC input voltage is higher than 1.8V the A8582 will be enabled. If the EN/SYNC input voltage is lower than 0.8V the A8582 will be disabled. Also, EN/SYNC may be used to simultaneously enable the A8582 and synchronize the PWM switching frequency by applying a square wave above 2.2MHz.

Note: Continuously applying more than 5.5V to the EN/SYNC pin may damage the A8582.

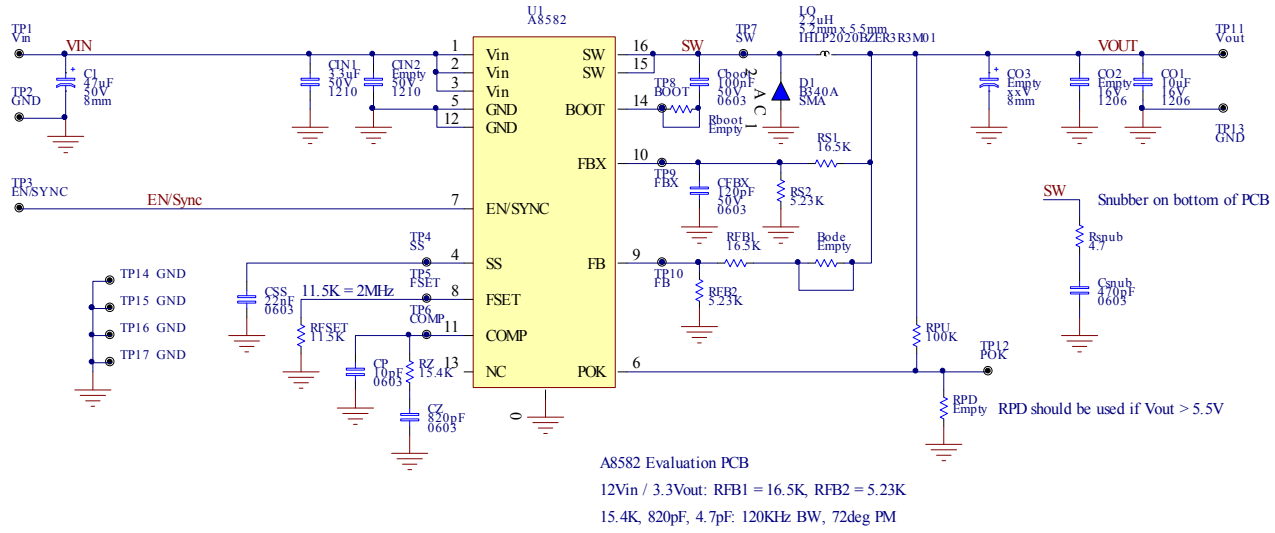
Output Load Connections:

Connect a load from V_{OUT} to GND. The steady-state load current can be as high as 2.0A. Pulse-by-pulse current limit and/or thermal shutdown will occur if the load is greater than 4.75A.

DEMO BOARD PICTURE



DEMO BOARD SCHEMATIC



Note: C1 is an optional, bulk, electrolytic capacitor for general supply filtering
